

NAVEEN BISHNOI

Software Architect & AI Automation Engineer

Portfolio: <https://bishnoinaveen.github.io/>

Email: 0029bishnoinaveen@gmail.com | Phone: +91 9478334329

PROFESSIONAL PROFILE

Software Architect and AI Engineer specializing in Autonomous Systems, Agentic AI, and High-Performance APIs. Proven track record in designing scalable distributed architectures, multi-agent frameworks, and IoT data pipelines. Passionate about bridging the gap between algorithmic power and human-centric design.

TECHNICAL EXPERTISE

Core: System Architecture, Agentic AI, Distributed Systems, Event-Driven Architecture

Languages: Python, TypeScript, JavaScript, SQL

Frameworks: React, Next.js, Astro, FastAPI, Node.js, LangChain, Autogen

Infrastructure: Kafka, PostgreSQL, Redis, Docker, Vector Databases

PROFESSIONAL EXPERIENCE

Software Engineer | KRONE Agriculture

Present

- Architected IoT telemetry pipelines for global agricultural machinery fleets.
- Implemented predictive maintenance algorithms reducing hardware downtime by 24%.
- Built high-throughput data ingestion layers handling 50,000+ concurrent connections.

Lead Developer | AEONIS OPS

Previous

- Built and scaled an autonomous orchestration platform for supply chain management.
- Developed a multi-agent consensus network to automate complex logistics decisions.
- Engineered the frontend with React/TypeScript and microservices with Node.js & Redis.

KEY PROJECTS & RESEARCH

Ultron Framework (Multi-Agent Consensus)

- Distributed execution DAG framework for autonomous AI agents using Python and LangChain.

Medallion Stream (Real-Time Architecture)

- Event-driven architecture achieving sub-200ms latency for dashboard updates via Kafka.

EDUCATION

B.Tech Computer Science

Engineering Graduate
